EDUCATION

Bachelor of Software Engineering, California Polytechnic State University - San Luis Obispo 2021 - 2025
Honors: Dean's Honor Roll (2022, 2024), College Track Scholar (2018 - 2025), 3x SHPE Scholarship Recipient

SKILLS

Programming Languages	Python, Java, JavaScript, TypeScript, HTML, CSS, SQL, C, Kotlin
Frameworks/Libraries	React.js, Vue.js, Spring Boot, React Native, Express.js, Flask, Jest, Mockito
Tools/Platforms	Git, Node.js, Yarn, Docker, Gradle, MongoDB, PostgreSQL, Travis CI

EXPERIENCE

Embedded Systems Intern Jun - Aug 2025
Gradient Comfort *San Francisco, CA*

- Architected a Travis CI pipeline to automate hardware integration testing on PRs, eliminating approximately 5 hours of manual execution per developer weekly
- Leveraged Redis as a message broker to manage state across 3+ concurrent pipeline processes, isolating blocking I/O to ensure reliable hardware control

Software Engineering Intern Jun - Aug 2024
Banyan Infrastructure *San Francisco, CA*

- Secured client access by implementing DocuSign OAuth 2.0 using token-based authorization and 24-hour session persistence, allowing seamless authentication and eliminating redundant daily logins
- Streamlined document workflows by integrating 10 DocuSign APIs to automate envelope creation, track status via webhooks, persist envelope metadata, and retrieve signed documents for platform use

Software Engineering Intern Jun - Aug 2023
Banyan Infrastructure *San Francisco, CA*

- Eliminated knowledge-retrieval bottlenecks by deploying a Vue.js and REST API discovery tool that served as the source of truth for 20 metric definitions across 7 departments

PROJECTS

Transfer Learning Image Classifier | OpenCV, TensorFlow, Keras, MobileNetV2 Feb 2026 - Present

- Engineering a custom clothing recognition system in Python for automated data acquisition and preprocessing to build a robust dataset for supervised learning
- Developing an image classification model by fine-tuning a pre-trained MobileNetV2 network, optimizing the architecture with custom dense layers to classify specific clothing items against background noise

Q2S Staff | TypeScript, Java, Docker, Spring Boot, PostgreSQL Oct 2024 - Jun 2025

- Designed the relational database, mapping 5+ PostgreSQL entities for the backend of an academic advisor portal, implementing a Spring Boot layered architecture to facilitate an institutional system transition
- Refactored the codebase by extracting 80% of duplicate logic into modular, reusable components, significantly improving long-term maintainability and reducing overall technical debt

Bathroom Finder | TypeScript, React Native, Node.js, MongoDB Jan 2024 - Jun 2025

- Developed a cross-platform React Native application with custom Node.js controllers to query a MongoDB database for real-time location fetching and multi-parameter amenity filtering
- Validated asynchronous data flows and UI state by developing comprehensive Jest test suites, achieved 100% coverage across 10 custom controllers
