

KAYLA NGOC NHU TRAN

+1 (415) 730-1406 ◊ San Francisco, CA ◊ kaylatran2021@gmail.com ◊ [linkedin.com/in/kaylantran](https://www.linkedin.com/in/kaylantran)

EDUCATION

Bachelor of Software Engineering, California Polytechnic State University - San Luis Obispo 2021 - 2025
Honors: Dean's Honor Roll (2022, 2024), College Track Scholar (2018 - 2025), 3x SHPE Scholarship Recipient

SKILLS

Programming Languages	Python, Java, JavaScript, TypeScript, HTML, CSS, SQL, C, Kotlin
Frameworks/Libraries	React.js, Vue.js, Spring Boot, React Native, Express.js, Flask, Jest, Mockito
Tools/Platforms	Git, Node.js, Yarn, Docker, Gradle, MongoDB, PostgreSQL, Travis CI

EXPERIENCE

Embedded Systems Intern Jun - Aug 2025
Gradient Comfort *San Francisco, CA*

- Architected a Travis CI pipeline to automate hardware integration testing on pull requests, eliminating manual execution by configuring build triggers and managing inter-component communication
- Leveraged Redis as a message broker and HTTP endpoints to manage state and isolate blocking I/O operations, ensuring reliable hardware control within a multiprocessing system

Software Engineering Intern Jun - Aug 2024
Banyan Infrastructure *San Francisco, CA*

- Secured client access and enabled eSignature integration by implementing DocuSign OAuth 2.0 using token-based authorization and session persistence, allowing seamless authentication within the platform
- Streamlined document workflows by integrating DocuSign APIs to automate envelope creation, track status via webhooks, persist envelope metadata, and retrieve signed documents for platform use

Software Engineering Intern Jun - Aug 2023
Banyan Infrastructure *San Francisco, CA*

- Eliminated knowledge-retrieval bottlenecks by deploying a Vue.js and REST API discovery tool that served as the source of truth for metric definitions across all departments

PROJECTS

Transfer Learning Image Classifier | OpenCV, TensorFlow, Keras, MobileNetV2 Feb 2026 - Present

- Engineered a custom clothing recognition system in Python for automated data acquisition and preprocessing to build a robust dataset for supervised learning
- Developing an image classification model by fine-tuning a pre-trained MobileNetV2 network, optimizing the architecture with custom dense layers to classify specific clothing items against background noise

Q2S Staff | TypeScript, Java, Docker, Spring Boot, PostgreSQL Oct 2024 - Jun 2025

- Designed relational PostgreSQL schemas and architected the backend for an academic advisor portal, implementing an Spring Boot layered architecture to facilitate a institutional system transition
- Refactored the codebase by extracting duplicate logic into modular, reusable components, significantly improving long-term maintainability and reducing overall technical debt

Bathroom Finder | TypeScript, React Native, Node.js, MongoDB Jan 2024 - Jun 2025

- Developed a cross-platform React Native application with custom Node.js controllers to query a MongoDB database for real-time location fetching and multi-parameter amenity filtering
- Validated asynchronous data flows and UI state by developing comprehensive Jest test suites, utilizing API mocking to ensure error handling
